HIGHLIGHTS

Summary

I am a software engineer focused on data infrastructure, web applications, automated testing, and internal tooling. Built developer-productivity systems including an automated SQL testing framework, a SQL view DDL remediation pipeline, and a patented primary account number detection system. Strong foundation in data modeling and backend systems, with a track record of shipping production code at both quality and velocity. Currently pursuing an MS in Computer Science.

AI Experience

SteadyState: Contributed to the AI coach feature of a fitness SaaS; built backend services for personalized training plan generation using LLMs and structured output schemas (<https://steadystate.fit/>)

PreFile: Built a full-stack AI SaaS that automates insurance compliance pre-review for policy form filings (beta phase)

Technical Skills

Languages: Python, SQL, C++, Go (Golang), Java, C, TypeScript

Frameworks & Libraries: FastAPI, NestJS, Next.js, React, Flask, Streamlit, Tailwind CSS

Databases & Data Layer: Snowflake, PostgreSQL, DynamoDB, GraphQL

Cloud & DevOps: AWS, Terraform, Docker, Bitbucket Pipelines, CI/CD

Tools & Methodologies: Git, GitHub, Bitbucket, Jira, Agile/Scrum

Core Competencies: System Architecture, Object-Oriented Design (OOD), API Design, Full-Stack Development, Developer Tooling

Other Skills

Multilingual: English, French, and Lingala

PROFESSIONAL EXPERIENCE

Software Engineer | Arkatechure, Portland, ME

2025 - Present

Data Analyst

2022 - 2025

Platform Engineering & Internal Tools:

- Contributed to EasyETL, an application that lets non-technical users build ETL pipelines without engineering support. Implementing a React/Next.js front end, a FastAPI backend, Auth0 authentication, and DynamoDB as the database layer.
- Designed and deployed an automated data classification system that programmatically scans and profiles SQL databases for primary account numbers (PAN), ensuring strict adherence to PCI-DSS compliance frameworks.

- Engineered an automated data masking service using AWS Step Functions and Lambda that enforces Snowflake privacy policies and implements a zero-trust access control mechanism, dynamically revoking low-privilege role permissions until data masking successfully completes.
- Built an extensible SQL DDL testing framework using the Strategy pattern and information_schema introspection, automating validation suites to enforce schema governance and reduce manual testing time by 80%.

Data Platform & Architecture:

- Established testing standards and review process for a 30-person analytics team, reducing defects by 20% and standardizing SQL development best practices
- Maintained SQL objects with complex cross-schema dependencies in Snowflake for 40 clients to support business-critical Tableau data sources and dashboards
- Designed and implemented data models supporting in-depth business analysis in the banking industry

Software Support Specialist | Tyler Technologies, Yarmouth, ME **2021 - 2022**

- Diagnosed and resolved database errors using SQL across client production environments
- Delivered client training presentations on software functionality and best practices

EDUCATION

M.S. Computer Science **2024-Present** *(Expected completion: Fall 2026)*

Northeastern University Roux Institute

- Relevant Coursework: Algorithms, Data Structures, Object-Oriented Design, Discrete Structures
- Additional Training: MIT 6.S081 Operating System Engineering

M.S. Data Analytics **2020-2022**

Western Governors University

- Capstone: Analyzing Inflation Crisis in African Countries:
<https://github.com/Camillekiro/Inflation-Crisis-in-African-Countries>

B.A. Economics **2015-2019**

University of New Hampshire

Certificates

- AWS Cloud Practitioner
